

## Make-up Work-Urban Observatory App

The Urban Observatory is an interactive exhibit that gives you the chance to compare maps of cities around the world—all from one location. It aims to make the world's data both understandable and useful. Not to mention, it is a very accessible and easy way of obtaining reliable information about global, urban cities. The idea is to see and understand trends, patterns, and relationships in the geographic context. With this app we can take care of many urban problems such as transportation, poverty, health, distribution, society, economics, quality of life, etc. The app is very convenient for educators, researchers, tourists or simply people who are interested in learning. The urban observatory app is a very easy way of comparing different city areas according to their different characteristics.

When you go into the website and launch the app it will appear a series of maps. To the left you see a series of themes and categories to choose from. These themes are work, movement, people, public, systems. These themes divide into sublevels that allow you to compare more accurately different city areas. Next to the theme section there is a box that says cities. This box allows you to select the cities you want to compare. You may choose up to three cities. Urban observatory is a wonderful tool for teaching and learning space, time and relationships.
